

We defined the following four relations, for each relation, primary/foreign keys are indicated in the code below:

```
drop table if exists Item;
drop table if exists User;
drop table if exists Category;
drop table if exists Bid;

create table Item (
    ItemID INTEGER PRIMARY KEY,
    Name TEXT,
    Currently REAL,
    Buy_Price REAL,
    First_Bid REAL,
    Number_of_Bids INTEGER,
    Started TEXT,
    Ends TEXT,
    Description TEXT,
    SellerID TEXT,
    FOREIGN KEY (SellerID) REFERENCES User(UserID)
);

create table User (
    UserID TEXT PRIMARY KEY,
    Rating INTEGER,
    Location TEXT,
    Country TEXT
);

create table Category (
    ItemID INTEGER,
    Category TEXT,
    FOREIGN KEY (ItemID) REFERENCES Item(ItemID)
);

create table Bid (
    ItemID INTEGER,
    BidTime TEXT,
    Amount REAL,
    BidderID TEXT,
    FOREIGN KEY (ItemID) REFERENCES Item(ItemID),
    FOREIGN KEY (BidderID) REFERENCES User(UserID)
);
```
